	<p>Raman was a 28 years old single male who, at the time entered treatment, suffered from severe obsessive thought images about causing harm to others such as running pedestrians while he was driving. He also had severe obsessions that he would commit a crime such as robbing a store, poisoning family members or friends. These obsessions were accompanied by lengthy and excessive checking rituals. For example one day when he drove, he began obsessing that he had caused an accident and hit a pedestrian at an intersection and he felt compelled to spend several hours driving and wandering around all parts of that intersection to find evidence of the accident.</p> <p>At the time Raman went to an anxiety disorder clinic, he was no longer able to live by himself after having lived alone for several years since college. He was a very bright young man with considerable artistic talent. He had finished college at a prestigious school for the arts and had launched a successful career as a young artist when the obsession began in his 20s. At first, they were focused on the possibility that he was implicated in some crime that he had committed; later it evolved to the point where he was afraid that he might actually commit a crime and confess to it. The checking rituals and avoidance of all the places where such confessions might eventually led to his having to give up his career and his apartment and move back in with his family.</p> <p>Answer the questions given below based on the case.</p>
